|                                      |                   | <b>3</b> | <b>0</b> | <b>0</b> | <b>3</b> |
| <b>INFORMATION RETRIEVAL SYSTEMS</b> |                   |          |          |          |          |

**Course Objectives:**

- To introduce the basic concepts, components, and evaluation methods of Information Retrieval (IR) systems.
- To understand and apply indexing techniques such as inverted files, signature files, and advanced text indices for efficient information storage and retrieval.
- To study lexical processing techniques including stop lists, stemming algorithms, and thesaurus construction for improving retrieval performance.
- To analyze and apply classical string searching algorithms and appropriate data structures in text retrieval applications.

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand the fundamentals of Information Retrieval (IR) systems, their components, and evaluation methods.

**CO2:** Explain and construct inverted files and signature files for efficient text retrieval.

**CO3:** Apply lexical analysis techniques, stop lists, and advanced text indexing methods such as PAT trees.

**CO4:** Analyze and implement stemming algorithms and thesaurus construction techniques for IR optimization.

**CO5:** Compare and apply classical string matching algorithms used in text searching.

**CO6:** Select appropriate data structures and algorithms to design efficient information retrieval solutions.

**Unit I: Introduction to Information storage and retrieval systems:** Domain Analysis of IR systems, IR and other types of Information Systems, IR System Evaluation **Introduction to Data structures and algorithms related to Information Retrieval:** Basic Concepts, Data structures, Algorithms.

**Unit II: Inverted Files and Signature Files:** Introduction, Structures used in Inverted Files, building an Inverted file using a sorted array, Modifications to the Basic Techniques.

**Signature Files:** Concepts of Signature files, Compression, Vertical Partitioning, Horizontal Partitioning.

**Unit III: New Indices for Text, Lexical Analysis and Stop lists: PAT Trees and PAT Arrays:** Introduction, PAT Tree structure, Algorithms on the PAT Trees, Building PAT Trees as PATRICA Trees, PAT representation as Arrays. Stop lists.

**Unit IV: Stemming Algorithms and Thesaurus Construction:** Types of Stemming algorithms, Experimental Evaluations of Stemming, stemming to Compress Inverted Files.

**Thesaurus Construction:** Features of Thesauri, Thesaurus Construction, Thesaurus construction from Texts, Merging existing Thesauri.

**Unit V: String Searching Algorithms:** Introduction, Preliminaries, The Naive Algorithm, The Knut-Morris-Pratt Algorithm, The Boyer-Moore Algorithm, The Shift-Or Algorithm, The Karp-Rabin Algorithm.

#### **TEXT BOOKS**

1. Modern Information Retrieval, Ricardo Baeza- Yates, Neto, PEA, 2007.
2. Information Storage and Retrieval Systems: Theory and Implementation, Kowalski, Gerald, Mark Academic Press, 2000.

|                               |                   | <b>3</b> | <b>0</b> | <b>0</b> | <b>3</b> |
| <b>COMPUTER NETWORKS</b>      |                   |          |          |          |          |

**Course Objectives:**

- To understand the Fundamental Concepts related to sources, shadows and shading
- To understand the Geometry of Multiple Views..

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand the fundamentals of computer networks, reference models, and the evolution of the Internet.

**CO2:** Explain data link layer functions, transmission media, and error control mechanisms.

**CO3:** Analyze multiple access protocols and Ethernet-based wired LAN technologies.

**CO4:** Apply network layer concepts including routing, congestion control, and IP addressing schemes.

**CO5:** Compare transport layer protocols such as TCP, UDP, and SCTP for reliable communication.

**CO6:** Describe application layer protocols and services including WWW, HTTP, DNS, email, and file transfer.

**UNIT I: Introduction:** Types of Computer Networks, Reference Models- The OSI Reference Model, The TCP/IP Reference Model, A Critique of the OSI Model and Protocols, A Critique of the TCP/IP Reference Model. History of Internet.

**UNIT II: The Data Link Layer:** Transmission Media, Guided and Un-guided media, Data Link Layer Design Issues, Services Provided to the Network Layer, Error detecting and Error Correcting codes, Elementary Data Link Protocols, Sliding Window Protocols, HDLC, PPP. Multiple Access Protocols Wired LANs: Ethernet, Fast Ethernet, Gigabit Ethernet

**UNIT III: The Network Layer:** Network Layer Design Issues, Routing Algorithms, Congestion, Congestion control algorithms. The Network Layer in the Internet, The IP Version 4 Protocol, IP Addresses- Classful, CIDR, NAT, IP Version 6 Protocol, Transition from IPV4 to IPV6

**UNIT IV: The Transport Layer:** The Transport Layer Services, Transport Layer Protocols: UDP, TCP and SCTP

**UNIT V: The Application Layer:** The World Wide Web, HTTP, Domain Name Space, Remote Logging, Electronic Mail and File Transfer

**Text Books:**

1. "Computer Networks", Andrew S Tanenbaum, David J Wetherall, 5<sup>th</sup> Edition, Pearson
2. "Data Communications and Networking", Behrouz A Forouzan, 4<sup>th</sup> Edition, Tata McGraw Hill Education

**Reference Books:**

1. "Data and Computer Communication" , William Stallings, Pearson
2. "TCP/IP Protocol Suite", Behrouz Forouzan, McGraw Hill.

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand operating system concepts, services, structures, and system call mechanisms.

**CO2:** Explain process management, inter-process communication, multithreading, and CPU scheduling techniques.

**CO3:** Analyze synchronization mechanisms and deadlock handling methods in concurrent systems.

**CO4:** Apply memory management and virtual memory techniques for efficient resource utilization.

**CO5:** Describe storage management concepts including disk scheduling and mass storage structures.

**CO6:** Explain file system organization, implementation, protection mechanisms, and access control.

**UNIT-I: Operating Systems Overview:** Introduction, operating system functions, operating systems operations, Computing environments, Free and Open-Source Operating Systems System Structures: Operating System Services, User and Operating-System Interface, system calls, Types of System Calls, system programs, operating system Design and Implementation, operating system structure, Building and Booting an Operating System, Operating system debugging

**UNIT-II: Processes:** Process Concept, Process scheduling, Operations on processes, Inter-process communication. Threads and Concurrency: Multithreading models, Thread libraries, Threading issues. CPU Scheduling: Basic concepts, Scheduling criteria, Scheduling algorithms, Multiple processor scheduling.

**UNIT-III: Synchronization Tools:** The Critical Section Problem, Peterson's Solution, Mutex Locks, semaphores, Monitors, Classic problems of Synchronization. Deadlocks: system Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from Deadlock.

**UNIT-IV: Memory- Management Strategies:** Introduction, Contiguous memory allocation, Paging, Structure of the Page Table, Swapping. Virtual Memory Management: Introduction, Demand paging, Copy-on-write, Page replacement Allocation of frames, Thrashing Storage Management: Overview of Mass Storage Structure, HDD Scheduling.

**UNIT-V: File System:** File System Interface: File concept, Access methods, Directory Structure; File system Implementation: File-system structure, File-system Operations, Directory implementation, Allocation method, Free space management; File-System Internals: File-System Mounting, Partitions and Mounting, File Sharing. Protection: Goals of protection, Principles of protection, Protection Rings, Domain of protection, Access matrix

**Course Objectives:**

The objectives of this course are to introduce

- Software life cycle models, Software requirements and SRS document.
- Project Planning, quality control and ensuring good quality software.
- Software Testing strategies, use of CASE tools, Implementation issues, validation & verification procedures.

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand the evolution of software engineering and apply suitable software life cycle models.

**CO2:** Apply software project management techniques including estimation, metrics, and risk management.

**CO3:** Analyze software requirements and develop formal and structured specifications.

**CO4:** Design modular, agile, and user-friendly software systems using appropriate design methodologies.

**CO5:** Apply coding standards, testing strategies, and quality management practices to ensure software reliability.

**CO6:** Explain CASE tools, software maintenance, and reuse techniques for long-term software sustainability.

**UNIT-I: Introduction:** Evolution, Software development projects, Exploratory style of software developments, Emergence of software engineering, Notable changes in software development practices, Computer system engineering.

**Software Life Cycle Models:** Basic concepts, Waterfall model and its extensions, Rapid application development, agile development model, Spiral model.

**UNIT-II: Software Project Management:** Software project management complexities, Responsibilities of a software project manager, Metrics for project size estimation, Project estimation techniques, Empirical Estimation techniques, COCOMO, Halstead's software science, risk management.

**Requirements Analysis and Specification:** Requirements gathering and analysis, Software Requirements Specification (SRS), Formal system specification, Axiomatic specification, Algebraic specification, Executable specification and 4GL.

**UNIT-III: Software Design:** Overview of the design process, how to characterize a good software design? Layered arrangement of modules. Cohesion and Coupling. Approaches to software design. Agility: Agility and the Cost of Change, Agile Process, Extreme Programming (XP), Other Agile Process Models, Tool Set for the Agile Process (Text Book 2)

**Function-Oriented Software Design:** Overview of SA/SD methodology, structured analysis, developing the DFD model of a system, structured design, detailed design, and Design Review.

**User Interface Design:** Characteristics of a good user interface, Basic concepts, Types of user interfaces, Fundamentals of component-based GUI development, and user interface design methodology.

**UNIT-IV: Coding and Testing:** Coding, Code review, Software documentation, Testing, Black-box testing, White-Box testing, Debugging, Program analysis tools, Integration testing, testing object-oriented programs, Smoke testing, and Some general issues associated with testing.

**Software Reliability and Quality Management:** Software reliability. Statistical testing, Software quality Software quality management system, ISO9000. SEI Capability maturity model. Few other important quality standards and Six Sigma.

**UNIT-V: Computer-Aided Software Engineering (Case):** CASE and its scope, CASE environment, CASE support in the software life cycle, other characteristics of CASE tools, Towards second generation CASE Tool, and Architecture of a CASE Environment.

**Software Maintenance:** Characteristics of software maintenance, Software reverse engineering, and Software maintenance process models and Estimation of maintenance cost.

**Software Reuse:** Reuse-definition, introduction, reason behind no reuse so far, Basic issues in any reuse program, A reuse approach, and Reuse at organization level.

**Course Objectives:**

- To explain the evolving utility computing model called cloud computing.
- To introduce the various levels of services offered by cloud.
- To discuss the fundamentals of cloud enabling technologies such as distributed computing, service-oriented architecture and virtualization.
- To emphasize the security and other challenges in cloud computing.
- To introduce the advanced concepts such as containers, server less computing and cloud-centric Internet of Things.

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand cloud computing fundamentals, service models, deployment models, and major cloud service providers.

**CO2:** Explain cloud enabling technologies including parallel, distributed computing, SOA, web services, and virtualization.

**CO3:** Analyze virtualization and container technologies and their role in cloud infrastructure management.

**CO4:** Evaluate cloud computing challenges related to scalability, security, interoperability, and energy efficiency.

**CO5:** Apply advanced cloud concepts such as serverless computing, DevOps, and infrastructure-as-code.

**CO6:** Identify emerging cloud paradigms including IoT integration, edge/fog computing, and quantum cloud computing.

**UNIT -I: Introduction to Cloud Computing Fundamentals:** Cloud computing at a glance, defining cloud, cloud computing reference model, types of services (IaaS, SaaS, SaaS), cloud deployment models (public, private, hybrid), utility computing, cloud computing characteristics and benefits, cloud service providers (Amazon Web Services, Microsoft Azure, Google App Engine).

**UNIT-II: Cloud Enabling Technologies:** Ubiquitous Internet, parallel and distributed computing, elements of parallel computing, hardware architectures for parallel computing (SISD, SIMD, MISD, MIMD), elements of distributed computing, Inter-process communication, technologies for distributed computing, remote procedure calls (RPC), service-oriented architecture (SOA), Web services, virtualization.

**UNIT-III: Virtualization and Containers:** Characteristics of virtualized environments, taxonomy of virtualization techniques, virtualization and cloud Computing, pros and cons of virtualization, technology examples (XEN, VMware), building blocks of containers, container platforms (LXC, Docker), container orchestration, Docker Swarm and Kubernetes, public cloud VM (e.g. AmazonEC2) and container (e.g. Amazon Elastic Container Service) offerings.

**UNIT-IV: Cloud computing challenges:** Economics of the cloud, cloud interoperability and standards, scalability and fault tolerance, energy efficiency in clouds, federated clouds, cloud computing security, fundamentals of computer security, cloud security architecture, cloud shared responsibility model, security in cloud deployment models.

**UNIT -V: Advanced concepts in cloud computing:** Server less computing, Function-as-a-Service, server less computing architecture, public cloud (e.g. AWS Lambda) and open-source (e.g. Open FaaS) server less platforms, Internet of Things (IoT), applications, cloud-centric IoT and layers, edge and fog computing, DevOps, infrastructure-as-code, quantum cloud computing.

**Course Objectives:**

- Vision and Introduction to Internet of Things(IoT).
- Understand IoT Market perspective.
- Data and Knowledge Management and use of Devices in IoT Technology.
- Understand State of the Art –IoT Architecture.
- Understand Real World IoT Design Constraints, Industrial Automation and Commercial.

**Course Outcomes (COs) :** After completion of course, students would be able to

**CO1:** Understand the fundamentals, architecture, and communication principles of Internet of Things systems.

**CO2:** Explain IoT/M2M system layers, standards, business models, and device management mechanisms.

**CO3:** Analyze web and message-based communication protocols for connected IoT devices.

**CO4:** Apply data acquisition, organization, and analytics techniques in IoT/M2M applications.

**CO5:** Use cloud platforms and service models for IoT data collection, storage, and computation.

**CO6:** Identify sensing technologies including sensors, RFID, wireless sensor networks, and actuators.

**UNIT I: The Internet of Things:** An Overview of Internet of things, Internet of Things Technology, behind IoTs Sources of the IoTs, M2M Communication, Examples of IoTs, Design Principles for Connected Devices Internet Connectivity Principles, Internet connectivity, Application Layer Protocols: HTTP, HTTPS, FTP, Telnet.

**UNIT II:** Business Models for Business Processes in the Internet of Things, IoT/M2M systems LAYERS AND designs standardizations, Modified OSI Stack for the IoT/M2M Systems, ETSI M2M domains and High- level capabilities ,Communication Technologies, Data Enrichment and Consolidation and Device Management Gateway Ease of designing and affordability

**UNIT III:** Design Principles for the Web Connectivity for Connected-Devices, Web Communication protocols for Connected Devices, Message Communication protocols for Connected Devices, Web Connectivity for Connected-Devices.

**UNIT IV:** Data Acquiring, Organizing and Analytics in IoT/M2M, Applications /Services /Business Processes, IOT/M2M Data Acquiring and Storage, Business Models for Business Processes in the Internet Of Things, Organizing Data, Transactions, Business Processes, Integration and Enterprise Systems.

**UNIT V:** Data Collection, Storage and Computing Using a Cloud Platform for IoT/M2M Applications/Services, Data Collection, Storage and Computing Using cloud platform Everything as a service and Cloud Service Models, IOT cloud-based services using the Xively (Pachube/COSM), Nimbits and other platforms Sensor, Participatory Sensing, Actuator, Radio Frequency Identification, and Wireless, Sensor Network Technology, Sensors Technology, Sensing the World.

**Text Books:**

**Course Objectives:** The main objectives of the course are to

- Introduce the fundamentals of Exploratory Data Analysis
- Cover essential exploratory techniques for understanding multi variate data by
- Summarizing it through statistical methods and graphical methods.
- Evaluate the Models and select the best model

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand the fundamentals, process, and tools of Exploratory Data Analysis for data-driven decision making.

**CO2:** Apply data visualization techniques to explore patterns, trends, and relationships in datasets.

**CO3:** Perform data transformation, cleaning, and preprocessing to prepare datasets for analysis.

**CO4:** Analyze datasets using descriptive statistics, probability distributions, and time series techniques.

**CO5:** Develop and evaluate machine learning models using appropriate performance metrics.

**CO6:** Conduct end-to-end data analysis using EDA and model evaluation on real-world datasets.

**UNIT-I: Exploratory Data Analysis Fundamentals:** Understanding data science, the significance of EDA, steps in EDA, Making sense of data, Numerical data, Categorical data, Measurement scales, Comparing EDA with classical and Bayesian analysis, Software tools available for EDA, Getting started with EDA.

**Sample Experiments:**

1. a) Download Data set from Kaggle using the following link:  
<https://www.kaggle.com/datasets/sukhmanibedi/cars4u>  
b) Install python libraries required for Exploratory Data Analysis (numpy, pandas, matplotlib, seaborn)
2. Perform Numpy Array basic operations and Explore Numpy Built-in functions.
3. Loading Data set into pandas data frame
4. Selecting rows and columns in the data frame

**UNIT-II: Visual Aids for EDA:** Technical requirements, Line chart, Bar charts, Scatter plot using seaborn, Polar chart, Histogram, Choosing the best chart

**Case Study:** EDA with Personal Email, Technical requirements, Loading the dataset, Data transformation, Data cleansing, applying descriptive statistics, Data refactoring, Data analysis.

**Sample Experiments:**

1. Apply different visualization techniques using sample dataset
  - a. Line Chart
  - b. Bar Chart
  - c. Scatter Plots
  - d. Bubble Plot
2. Generate Scatter Plot using seaborn library for iris dataset
3. Apply following visualization Techniques for a sample dataset
  - a. Area Plot
  - b. Stacked Plot
  - c. Pie chart
  - d. Table Chart
4. Generate the following charts for a dataset.
  - a. Polar Chart
  - b. Histogram
  - c. Lollipop chart
5. Case Study: Perform Exploratory Data Analysis with Personal Email Data

**UNIT-III: Data Transformation:** Merging database-style data frames, Concatenating along with an axis, Merging on index, Reshaping and pivoting, Transformation techniques, Handling missing data, Mathematical operations with NaN, Filling missing values, Discretization and binning, Outlier detection and filtering, Permutation and random sampling, Benefits of data transformation, Challenges.

**Sample Experiments:**

1. Perform the following operations
  - a) Merging Data frames
  - b) Reshaping with Hierarchical Indexing
  - c) Data Deduplication
  - d) Replacing Values
2. Apply different Missing Data handling techniques
  - a) NaN values in mathematical Operations
  - b) Filling in missing data
  - c) Forward and Backward filling of missing values
  - d) Filling with index values
  - e) Interpolation of missing values
3. Apply different data transformation techniques
  - a) Renaming axis indexes
  - b) Discretization and Binning
  - c) Permutation and Random Sampling
  - d) Dummy variables

**UNIT- IV: Descriptive Statistics:** Distribution function, Measures of central tendency, Measures of dispersion, Types of kurtosis, Calculating percentiles, Quartiles, Grouping Datasets, Correlation, Understanding univariate, bivariate, multivariate analysis, Time Series Analysis

**Sample Experiments:**

1. Study the following Distribution Techniques on a sample data
  - a) Uniform Distribution
  - b) Normal Distribution
  - c) Gamma Distribution
  - d) Exponential Distribution
  - e) Poisson Distribution
  - f) Binomial Distribution
2. Perform Data Cleaning on a sample dataset.
3. Compute measure of Central Tendency on a sample dataset
  - a) Mean
  - b) Median
  - c) Mode
4. Explore Measures of Dispersion on a sample dataset
  - a) Variance
  - b) Standard Deviation
  - c) Skewness
  - d) Kurtosis
5. a) Calculating percentiles on sample dataset
  - b) Calculate Inter Quartile Range(IQR) and Visualize using Box Plots
6. Perform the following analysis on automobile dataset.
  - a) Bivariate analysis
  - b) Multivariate analysis
7. Perform Time Series Analysis on Open Power systems dataset

**UNIT-V: Model Development and Evaluation:** Unified machine learning workflow, Data preprocessing, Data preparation, Training sets and corpus creation, Model creation and training, Model evaluation, Best model selection and evaluation, Model deployment

Case Study: EDA on Wine Quality Data Analysis

**Sample Experiments:**

1. Perform hypothesis testing using stats models library
  - a) Z-Test
  - b) T-Test
2. Develop model and Perform Model Evaluation using different metrics such as prediction score, R2 Score, MAE Score, MSE Score.
3. Case Study: Perform Exploratory Data Analysis with Wine Quality Dataset. Text Book:
  1. Suresh Kumar Mukhiya, Usman Ahmed, Hands-On Exploratory Data Analysis with Python, Packt Publishing, 2020.

**Course Outcomes (COs):** After completion of course, students would be able to

**CO1:** Understand the fundamentals of automata theory including finite automata, languages, and regular expressions.

**CO2:** Analyze nondeterministic and deterministic finite automata and their conversions.

**CO3:** Apply context-free grammars, pushdown automata, and parsing techniques to language recognition problems.

**CO4:** Explain Turing machines, computability concepts, and undecidable problems.

**CO5:** Understand compiler phases including lexical analysis, syntax analysis, and parsing methods.

**CO6:** Apply syntax-directed translation and intermediate code generation techniques in compiler design.

**UNIT – I: Introduction to Finite Automata:** Structural Representations, Automata and Complexity, the Central Concepts of Automata Theory – Alphabets, Strings, Languages, and Problems. Nondeterministic Finite Automata: Formal Definition, an application, Text Search, Finite Automata with Epsilon-Transitions. **Deterministic Finite Automata:** Definition of DFA, How A DFA Process Strings, The language of DFA, Conversion of NFA with  $\epsilon$ -transitions to NFA without  $\epsilon$ -transitions. Conversion of NFA to DFA.

**UNIT – II: Regular Expressions:** Finite Automata and Regular Expressions, Applications of Regular Expressions, Algebraic Laws for Regular Expressions, Conversion of Finite Automata to Regular Expressions. Pumping Lemma for Regular Languages: Statement of the pumping lemma, Applications of the Pumping Lemma. **Context-Free Grammars:** Definition of Context-Free Grammars, Derivations Using a Grammar, Leftmost and Rightmost Derivations, the Language of a Grammar, Parse Trees, Ambiguity in Grammars and Languages.

**UNIT – III: Push Down Automata:** Definition of the Pushdown Automaton, the Languages of a PDA, Equivalence of PDA's and CFG's, Acceptance by final state Turing Machines: Introduction to Turing Machine, Formal Description, Instantaneous description, The language of a Turing machine Undecidability: Undecidability, A Language that is Not Recursively Enumerable, An Undecidable Problem That is RE, Undecidable Problems about Turing Machines

**UNIT - IV Introduction:** The structure of a compiler, Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Recognition of Tokens, The Lexical- Analyzer Generator Lex, Syntax Analysis: Introduction, Context-Free Grammars, Writing a Grammar, Top-Down Parsing, Bottom-Up Parsing, Introduction to LR Parsing: Simple LR, More Powerful LR Parsers R18 B.Tech. CS&D Syllabus JNTU Hyderabad

**UNIT - V Syntax-Directed Translation:** Syntax-Directed Definitions, Evaluation Orders for SDD's, Syntax Directed Translation Schemes, Implementing L-Attributed SDD's. Intermediate-Code Generation: Variants of Syntax Trees, Three-Address Code Run-Time Environments: Stack Allocation of Space, Access to Nonlocal Data on the Stack, Heap Management

**Course Outcomes:** On completion of this course, the student will be able to

**CO1:** Compute the similarity between text documents

**CO2:** Apply all pre-processing steps for text-data

**CO3:** Implement classification of text documents.

**CO4:** Perform document clustering using different algorithms.

**CO5:** Implement Page Rank algorithm for any network.

**CO6:** Apply advanced information retrieval techniques such as LSI, PageRank, and social media mining.

**Programming Language:** Python/R

**Lab Experiments:**

1. Representation of a Text Document in Vector Space Model and Computing Similarity between two documents.
2. Pre-processing of a Text Document: stop word removal and stemming
3. Construction of an Inverted Index for a given document collection comprising of at least 50 documents with a total vocabulary size of at least 1000 words.
4. Classification of a set of Text Documents into known classes (You may use any of the

Classification algorithms like Naïve Bayes, Max Entropy, Rochio's, Support Vector Machine). Standard Datasets will have to be used to show the results.

5. Text Document Clustering using K-means. Demonstrate with a standard dataset and compute performance measures- Purity, Precision, Recall and F-measure.
6. Crawling/Searching the Web to collect news stories on a specific topic (based on user input). The program should have an option to limit the crawling to certain selected websites only.
7. To parse XML text, generate Web graph and compute topic specific page rank
8. Implement Matrix Decomposition and LSI for a standard dataset.
9. Mining Twitter to identify tweets for a specific period (and/or from a geographic allocation) and identify trends and named entities.
10. Implementation of Page Rank on Scholarly Citation Network.

**Course Outcomes:** On completion of this course, the student will be able to

**CO1:** Identify, configure, and interconnect network devices to establish a Local Area Network.

**CO2:** Implement data link layer framing and error detection techniques such as stuffing, checksum, CRC, and Hamming code.

**CO3:** Implement and analyze flow control protocols including Stop-and-Wait, Go-Back-N, and Selective Repeat.

**CO4:** Apply congestion control and routing algorithms to optimize network performance.

**CO5:** Analyze network traffic and security features using tools such as Wireshark and Nmap.

**CO6:** Simulate and evaluate network performance parameters using NS2 simulator.

**List of Experiments:**

1. Study of Network devices in detail and connect the computers in Local Area Network.
2. Write a Program to implement the data link layer farming methods such as
  - i) Character stuffing ii) bit stuffing.
3. Write a Program to implement data link layer farming method checksum.
4. Write a program for Hamming Code generation for error detection and correction.
5. Write a Program to implement on a dataset of characters the three CRC polynomials–CRC12, CRC 16 and CRC CCIP.
6. Write a Program to implement Sliding window protocol for Go back N.

7. Write a Program to implement Sliding window protocol for Selective repeat.
8. Write a Program to implement Stop and Wait Protocol.
9. Write a program for congestion control using leaky bucket algorithm
10. Write a Program to implement Dijkstra's algorithm to compute the Shortest path through a Graph.
11. Write a Program to implement Distance vector routing algorithm by obtaining routing table at each node (Take an example subnet graph with weights indicating delay between nodes).
12. Write a Program to implement Broad cast tree by taking sub net of hosts.
13. Wire shark
  - i. Packet Capture Using Wire shark
  - ii. Starting Wire shark
  - iii. Viewing Captured Traffic
  - iv. Analysis and Statistics & Filters.
14. How to run Nmap scan
15. Operating System Detection using Nmap
16. Do the following using NS2 Simulator
  - i. NS2 Simulator-Introduction
  - ii. Simulate to Find the Number of Packets Dropped
  - iii. Simulate to Find the Number of Packets Dropped by TCP/UDP
  - iv. Simulate to Find the Number of Packets Dropped due to Congestion
  - v. Simulate to Compare Data Rate & Through put.

**Course Objectives:**

The main objectives of the course are to

- Make use of router, template engine and authentication using sessions to develop application in Express JS.
- Build a single page application using REST ful API sin Express JS
- Apply router and hooks in designing React JS application
- Make use of Mongo DB queries to perform CRUD operations on document database

**Course Outcomes:** On completion of this course, the student will be able to

**CO1:** Apply Type Script features such as types, classes, generics, modules, and functions to develop structured applications.

**CO2:** Develop backend applications using Express JS with routing, middleware, authentication, and session management.

**CO3:** Build RESTful APIs and perform CRUD operations using Mongo DB and Mongoose.

**CO4:** Design dynamic and interactive user interfaces using React components, props, state, hooks, and routing.

**CO5:** Integrate frontend and backend to develop full-stack web applications following MVC and REST principles.

**CO6:** Work collaboratively to design, deploy, and document real-world web applications using modern development practices.

## **Experiments covering the Topics:**

- Typescript
- Express JS–Routing, HTTP Methods, Middleware, Templating, Form Data
- Express JS–Cookies, Sessions, Authentication, Database, REST ful APIs
- React JS–Render HTML, JSX, Components–function & Class, Props and States, Styles, Respond to Events
- React JS – Conditional Rendering, Rendering Lists, React Forms, React Router, Updating the Screen
- React JS–Hooks, Sharing data between Components, Applications –To-do list and Quiz
- Mongo DB–Installation, Configuration, CRUD operations, Databases, Collections and Records

## **Sample Experiments:**

### **1. Type script**

- a. Write a program to understand simple and special types.
- b. Write a program to understand function parameter and return types.
- c. Write a program to show the importance with Arrow function. Use optional, default and REST parameters.
- d. Write a program to understand the working of type script with class, constructor, properties, methods and access specifiers.
- e. Write a program to understand the working of name spaces and modules.
- f. Write a program to understand generics with variables, functions and constraints.

### **2. Express JS–Routing, HTTP Methods, Middleware.**

- a. Write a program to define a route, Handling Routes, Route Parameters, Query Parameters and URL building.
- b. Write a program to accept data, retrieve data and delete a specified resource using http methods.
- c. Write a program to show the working of middleware.

### **3. Express JS– Templating, Form Data**

- a. Write a program using templating engine.
- b. Write a program to work with form data.

### **4. Express JS –Cookies, Sessions, Authentication**

- a. Write a program for session management using cookies and sessions.

### **5. Write a program for user authentication. Express JS–Database, REST ful APIs**

- a. Write a program to connect Mongo DB database using Mongoose and perform CRUD operations.
- b. Write a program to develop a single page application using REST ful APIs.

### **6. React JS–Render HTML, JSX, Components –function & Class**

- a. Write a program to render HTML to a web page.
- b. Write a program for writing markup with JSX.
- c. Write a program for creating and nesting components(function and class).

### **7. React JS–Props and States, Styles, Respond to Events**

- a. Write a program to work with props and states.
- b. Write a program to add styles(CSS & Sass Styling) and display data.
- c. Write a program for responding to events.

### **8. React JS–Condition a l Rendering, Rendering Lists, React Forms**

- a. Write a program for conditional rendering.
- b. Write a program for rendering lists.
- c. Write a program for working with different form fields using react forms.

### **9. React JS–React Router, Updating the Screen**

- a. Write a program for routing to different pages using react router.
- b. Write a program for updating the screen.

### **10. React JS–Hooks, Sharing data between Components**

- a. Write a program to understand the importance of using hooks.
- b. Write a program for sharing data between components.

### **11. React JS Applications–To-do list and Quiz**

- a. Design to-do list application.

### **12. Mongo DB–Installation, Configuration, CRUD operations**

- a. Install Mongo DB and configure ATLAS
- b. Write Mongo DB queries to perform CRUD operations on document using insert(),find(), update(), remove()

### **13. Mongo DB–Databases, Collections and Records**

- a. Write Mongo DB queries to Create and drop databases and collections.
- b. Write Mongo DB queries to work with records using find(),limit(),sort(),create Index(), aggregate().

### **14. Augmented Programs: (Any2mustbecompleted)**

- a. Design a to-do list application using Node JS and Express JS.
- b. Design a Quiz app using React JS.
- c. Complete the Mongo DB certification from Mongo DB University website.

**Course Objectives:**

- Learns to Implement Flutter Wid gets and Layouts
- Understands Responsive UI Design and with Navigation in Flutter
- Knowledge on Widges and customize wid gets for specific UI elements, Themes
- Understand to include animation a part from fetching data

**Course Outcomes:** On completion of this course, the student will be able to

**CO1:** Understand Dart programming fundamentals and set up the Flutter development environment.

**CO2:** Design user interfaces using Flutter widgets, layouts, and responsive design principles.

**CO3:** Implement navigation, state management, and reusable custom widgets in Flutter applications.

**CO4:** Develop interactive forms, apply validation techniques, and enhance UI using themes and animations.

**CO5:** Integrate REST APIs, fetch and display dynamic data, and handle asynchronous operations.

**CO6:** Apply testing, debugging, teamwork, and ethical development practices to deliver robust mobile applications.

**List of Experiments:**

Students need to implement the following experiments

1. a) Install Flutter and Dart SDK.  
b) Write a simple Dart program to understand the language basics.

2. a) Explore various Flutter widgets(Text, Image, Container, etc.).  
b) Implement different layout structures using Row, Column, and Stack widgets.
3. a) Design a responsive UI that adapts to different screen sizes.  
b) Implement media queries and break points for responsiveness.
4. a) Setup navigation between different screens using Navigator.  
b) Implement navigation with named routes.
5. a) Learn about state full and state less widgets.  
b) Implement state management using set State and Provider.
6. a) Create custom widgets for specific UI elements.  
b) Apply styling using themes and custom styles.
7. a) Design a form with various input fields.  
b) Implement form validation and error handling.
8. a) Add animations to UI elements using Flutter's animation framework.  
b) Experiment with different types of animations (fade, slide, etc.).
9. a) Fetch data from a REST API.  
b) Display the fetched data in a meaningful way in the UI.
10. a) Write unit tests for UI components.  
b) Use Flutter's debugging tools to identify and fix issues.

**Course Objectives:** This course introduces the fundamental concepts and techniques of natural language processing (NLP).

- Students will gain an in-depth understanding of the computational properties of natural languages and the commonly used algorithms for processing linguistic information.
- The course examines NLP models and algorithms using both the traditional symbolic and the more recent statistical approaches.
- Enable students to be capable to describe the application based on natural language processing and to show the points of syntactic, semantic and pragmatic processing.

**Course Outcomes:** On completion of this course, the student will be able to

**CO1:** Explain the foundations of NLP including language modeling, morphology, tokenization, and spelling correction.

**CO2:** Analyze word-level language models and apply PoS tagging using rule-based and probabilistic approaches.

**CO3:** Apply syntactic parsing techniques using context-free grammars, dependency grammars, and probabilistic models.

**CO4:** Interpret semantic representations and apply word sense disambiguation using supervised and knowledge-based methods.

**CO5:** Analyze discourse phenomena including anaphora, coreference resolution, and coherence modeling.

**CO6:** Utilize standard NLP tools, corpora, and lexical resources to build and evaluate real-world NLP applications.

**UNIT I: INTRODUCTION:** Origins and challenges of NLP – Language Modeling: Grammar-based LM, Statistical LM – Regular Expressions, Finite-State Automata – English Morphology, Transducers for lexicon and rules, Tokenization, Detecting and Correcting Spelling Errors, Minimum Edit Distance.

**UNIT II: WORD LEVEL ANALYSIS:** Unsmoothed N-grams, Evaluating N-grams, Smoothing, Interpolation and Back off – Word Classes, Part- of-Speech Tagging, Rule-based, Stochastic and Transformation-based tagging, Issues in PoS tagging – Hidden Markov and Maximum Entropy models.

**UNIT III: SYNTACTIC ANALYSIS:** Context-Free Grammars, Grammar rules for English, Tree banks, Normal Forms for grammar – Dependency Grammar – Syntactic Parsing, Ambiguity, Dynamic Programming parsing – Shallow parsing Probabilistic CFG, Probabilistic CYK, Probabilistic Lexicalized CFGs – Feature structures, Unification of feature structures

**UNIT IV: SEMANTICS AND PRAGMATICS:** Requirements for presentation, First-Order Logic, Description Logics – Syntax-Driven Semantic analysis, Semantic attachments – Word Senses, Relations between Senses, Thematic Roles, selectional restrictions – Word Sense Disambiguation, WSD using Supervised, Dictionary & Thesaurus, Bootstrapping methods – Word Similarity using Thesaurus and Distributional methods.

**UNIT V: DISCOURSE ANALYSIS AND LEXICAL RESOURCES:** Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brill's Tagger, Word Net, Prop Bank, Frame Net, Brown Corpus, British National Corpus (BNC).

**Course Objectives:**

1. The objective of this course is to cover the fundamentals of neural networks as well as some advanced topics such as recurrent neural networks, long short-term memory cells and convolution neural networks.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain biological neuron models and apply perceptron learning algorithms for linear classification.

**CO2:** Design and train feed-forward neural networks using back propagation, regularization, and auto encoders.

**CO3:** Apply advanced optimization and regularization techniques to improve deep neural network training.

**CO4:** Implement recurrent and convolutional neural networks for sequential and spatial data modeling.

**CO5:** Analyze generative deep learning models including RBMs, deep Boltzmann machines, and variational auto encoders.

**CO6:** Evaluate recent deep learning architectures such as Transformers and GPT for vision, speech, and NLP applications.

**UNIT-I: Basics-** Biological Neuron, Idea of computational units, McCulloch–Pitts unit and Thres holding logic, Linear Perceptron, Perceptron Learning Algorithm, Linear separability, Convergence theorem for Perceptron Learning Algorithm.

**UNIT-II: Feed forward Networks-**Multilayer Perceptron, Gradient Descent, Back propagation, Empirical Risk Minimization, regularization, auto encoders.

Deep Neural Networks: Difficulty of training deep neural networks, Greedy layer wise training.

**UNIT-III: Better Training of Neural Networks**-Newer optimization methods for neural networks (Adagrad, adadelta, rmsprop, adam, NAG), second order methods for training, Saddle point problem in neural networks, Regularization methods (dropout, drop connect, batch normalization).

**UNIT IV: Recurrent Neural Networks**- Back propagation through time, Long Short Term Memory, Gated Recurrent Units, Bidirectional LSTMs, Bidirectional RNNs.

**Convolutional Neural Networks:** Le Net, Alex Net. Generative models: Restrictive Boltzmann Machines (RBMs), Introduction to MCMC and Gibbs Sampling, gradient computations in RBMs, Deep Boltzmann Machines.

**UNIT V: Recent trends**- Variational Auto encoders, Transformers, GPT Applications: Vision, NLP, Speech

| <b>DATA VISUALIZATION</b> |            |   |   |   |   |

**Course Objective:**

- Familiarize students with the basic and advanced techniques of information visualization and scientific visualization
- Learn key techniques of the visualization process
- A detailed view of visual perception, the visualized data and the actual visualization, interaction and distorting techniques.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain visualization concepts, visual perception, and design principles for effective data representation.

**CO2:** Apply visualization reference models and visual mapping techniques to design visualization applications.

**CO3:** Analyze and classify visualization systems and apply interaction techniques for multidimensional data.

**CO4:** Visualize complex data structures such as trees, graphs, clusters, networks, and software systems.

**CO5:** Apply visualization techniques for volumetric, spatial, geographic, and simulation-based data.

**CO6:** Evaluate visualization effectiveness, address information overload, and explore recent trends and collaborative visualization techniques.

### Course Objectives

- To provide knowledge of the concepts in software testing such as testing process, criteria, strategies, and methodologies.
- To develop skills in software test automation and management using the latest tools.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain the fundamentals of software testing, bug classification, and the impact of software defects.

**CO2:** Apply path testing techniques using flow graphs, predicates, and achievable paths.

**CO3:** Perform transaction flow, data flow, and domain testing to identify logical and data-related faults.

**CO4:** Apply logic-based testing methods using decision tables, path expressions, and specifications.

**CO5:** Design and execute state-based testing using state graphs and transition testing techniques.

**CO6:** Utilize graph-based testing methods and automated testing tools to evaluate software quality.

| <b>CO6</b>      | 2            | 3            |

**UNIT – I:** Introduction: Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs Flow graphs and Path testing: Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

**UNIT–II:** Transaction Flow Testing: transaction flows, transaction flow testing techniques.

**Data Flow testing:** Basics of data flow testing, strategies in data flow testing, application of data flow testing.

**Domain Testing:** domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

**UNIT–III: Paths, Path products and Regular expressions:** path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

Logic Based Testing: overview, decision tables, path expressions, k v charts, specifications.

**UNIT – IV: State, State Graphs and Transition testing:** state graphs, good & bad state graphs, state testing, Testability tips.

**UNIT – V: Graph Matrices and Application:** Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. (Student should be given an exposure to a tool like J meter /selenium/ soap UI / Catalon).

**Text Books:**

**COURSE OBJECTIVES:**

1. Explain the objectives of information security
2. Explain the importance and application of each of confidentiality, integrity, authentication and availability
3. Understand the basic categories of threats to computers and networks
4. Discusses the Mathematics of Cryptography
5. Discuss the fundamental ideas of Symmetric and Asymmetric Cryptographic Algorithms
6. Discusses the Network layer, Transport Layer and Application Layer Protocols Enhanced security mechanisms.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain security principles, attack models, and classical encryption techniques for protecting information.

**CO2:** Apply mathematical foundations and algebraic structures used in symmetric and asymmetric cryptography.

**CO3:** Implement and analyze symmetric and asymmetric key cryptographic algorithms for secure communication.

**CO4:** Apply cryptographic hash functions, message authentication codes, and digital signatures for data integrity and authentication.

**CO5:** Analyze network and internet security protocols including TLS, IPsec, and secure email mechanisms.

**CO6:** Design secure systems by integrating cryptographic techniques while addressing ethical and societal security challenges.

**UNIT – I: Security Concepts:** Introduction, The need for security, Security approaches, Principles of security, Types of Security attacks, Security services, Security Mechanisms, A model for Network Security Cryptography. Classical Encryption Techniques-symmetric cipher model, Substitution techniques, Transposition techniques, Rotor Machines, Steganography.

**UNIT – II: Introduction to Symmetric Cryptography: Algebraic Structures-**Groups, Rings, Fields,  $GF(2^n)$  fields, Polynomials.

**Mathematics of Asymmetric cryptography:** Primes, checking for Primness, Euler's phi-functions, Fermat's Little Theorem, Euler's Theorem, Generating Primes, Primality Testing, Factorization, Chinese Remainder Theorem, Quadratic Congruence, Exponentiation and Logarithm.

**UNIT – III: Symmetric key Ciphers:** Block Cipher principles, DES, AES, Blowfish, IDEA, Block cipher operation, Stream ciphers: RC4, RC5

**Asymmetric key Ciphers:** Principles of public key cryptosystems, RSA algorithm, Diffie-Hellman Key Exchange, Elgamal Cryptographic system, Elliptic Curve Arithmetic, Elliptic Curve Cryptography.

**UNIT – IV: Cryptographic Hash Functions:** Applications of Cryptographic Hash Functions, Two Simple Hash Functions, Requirements and Security, Hash Functions Based on Cipher Block Chaining, Secure Hash Algorithms (SHA)

**Message Authentication Codes:** Message Authentication Requirements, Message Authentication Functions, Requirements for Message Authentication Codes, Security of MAC'S,MAC'S Based On Hash Functions: HMAC, MAC'S Based On Block Ciphers: DAA and CMAC

**Digital Signatures:** Digital Signatures, Elgamal Digital Signature Scheme, Elliptic Curve Digital Signature Algorithm, RSA-PSS Digital Signature Algorithm.

**UNIT – V: Network and Internet Security: Transport-Level Security:** Web Security Considerations, Transport Level Security, HTTPS, SSH.

**IP Security:** IP Security Overview, IP Security Policy, Encapsulating Security Payload, Authentication Header Protocol.

**Electronic-Mail Security:** Internet-mail Security, Email Format, Email Threats and Comprehensive Email Security, S/MIME, PGP.

#### **TEXT BOOKS:**

**Course Objectives:** The main objectives of this course are to:

1. Describe the agile relationship between development and IT operations.
2. Understand the skills and high-functioning teams involved in DevOps and related methods to reach a continuous delivery capability.
3. Implement automated system update and DevOps lifecycle.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain DevOps principles, Agile practices, SDLC models, and CI/CD workflows for software delivery.

**CO2:** Apply source code management using Git and perform unit testing and code quality analysis.

**CO3:** Implement build automation and continuous integration using Jenkins pipelines and related tools.

**CO4:** Apply continuous delivery and deployment practices using Docker and automated testing tools.

**CO5:** Implement configuration management and container orchestration using Ansible and Kubernetes/Open Shift.

**CO6:** Design, manage, and evaluate end-to-end DevOps pipelines while following ethical and collaborative practices.

| <b>CO6</b> | 3     | 3     |

**UNIT-I: Introduction to DevOps:** Introduction to SDLC, Agile Model. Introduction to DevOps. DevOps Features, DevOps Architecture, DevOps Lifecycle, Understanding Work flow and principles, Introduction to DevOps tools, Build Automation, Delivery Automation, Understanding Code Quality, Automation of CI/ CD. Release management, Scrum, Kanban, delivery pipeline, bottlenecks, examples

**UNIT-II: Source Code Management (GIT):**The need for source code control, The history of source code management, Roles and code, source code management system and migrations. What is Version Control and GIT, GIT Installation, GIT features, GIT workflow, working with remote repository, GIT commands, GIT branching, GIT staging and collaboration.

**UNIT TESTING-CODE COVERAGE:** Junit, n Unit & Code Coverage with Sonar Qube, Sonar Qube - Code Quality Analysis.

**UNIT-III: Build Automation-Continuous Integration(CI):**Build Automation, what is CI Why CI is Required, CI tools, Introduction to Jenkins (With Architecture), Jenkins workflow, Jenkins master slave architecture, Jenkins Pipelines, **PIPELINE BASICS** - Jenkins Master, Node, Agent, and Executor Freestyle Projects & Pipelines, Jenkins for Continuous Integration, Create and Manage Builds, User Management in Jenkins Schedule Builds, Launch Builds on Slave Nodes.

**UNIT-IV: Continuous Delivery:** Importance of Continuous Delivery, CONTINUOUS DEPLOYMENT CD Flow, Containerization with Docker: Introduction to Docker, Docker installation, Docker commands, Images & Containers, Docker File, running containers, working with containers and publish to Docker Hub.

**Testing Tools:** Introduction to Selenium and its features, Java Script testing.

**UNIT-V: Configuration Management - ANSIBLE:** Introduction to Ansible, Ansible tasks Roles, Jinja2 templating, Vaults, Deployments using Ansible.

**CONTAINERIZATION USING KUBERNETES (OPEN SHIFT):** Introduction to Kubernetes Namespace & Resources, CI/CD - On OCP, BC, DC & Config Maps, Deploying Apps on Openshift Container Pods. Introduction to Puppet master and Chef.

### List of Experiments:

1. Write code for a simple user registration form for an event.
2. Explore Git and Git Hub commands.
3. Practice Source code management on Git Hub. Experiment with the source code written in exercise 1.
4. Jenkins installation and setup, explore the environment.
5. Demonstrate continuous integration and development using Jenkins.
6. Explore Docker commands for content management.
7. Develop a simple containerized application using Docker.
8. Integrate Kubernetes and Docker
9. Automate the process of running containerized application developed in exercise 7 using Kubernetes.
10. Install and Explore Selenium for automated testing.
11. Write a simple program in Java Script and perform testing using Selenium.
12. Develop test cases for the above containerized application using selenium.

**Course Objectives:**

- This course covers the basic concepts of recommender systems, including personalization algorithms, evaluation tools, and user experiences.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain the fundamentals, applications, mathematical foundations, and challenges of recommender systems.

**CO2:** Implement and analyze collaborative filtering techniques, including user-based, item-based, and model-based approaches.

**CO3:** Design content-based and knowledge-based recommender systems using feature extraction and user profiling techniques.

**CO4:** Develop hybrid recommender systems by integrating multiple recommendation strategies and architectures.

**CO5:** Evaluate recommender systems using statistical, decision-support, and user-centered evaluation metrics.

**CO6:** Analyze social, trust-based, and community-driven recommender systems while addressing ethical and security concerns.

| <b>CO2</b>      | 3            | 1            |
| <b>CO3</b>      | 3            | 1            |
| <b>CO4</b>      | 3            | 2            |
| <b>CO5</b>      | 2            | 2            |
| <b>CO6</b>      | 2            | 3            |

**UNIT-I: Introduction:** Recommender system functions, Linear Algebra notation: Matrix addition, Multiplication, transposition, and inverses, covariance matrices, Understanding ratings, Applications of recommendation systems, Issues with recommender system.

**UNIT-II: Collaborative Filtering:**User-based nearest neighbour recommendation, Item-based nearest neighbour recommendation, Model based and pre-processing based approaches, Attacks on collaborative recommender systems.

**UNIT-III: Content-based recommendation:** High level architecture of content-based systems, Advantages and drawbacks of content based filtering, Item profiles, discovering features of documents, obtaining item features from tags, representing item profiles, Methods for learning user profiles, Similarity based retrieval, Classification algorithms.

**Knowledge based recommendation:** Knowledge representation and reasoning, Constraint based recommenders, Case based recommenders.

**UNIT-IV: Hybrid approaches:** Opportunities for hybridization, Monolithic hybridization design: Feature combination, Feature augmentation, Parallelized hybridization design: Weighted, Switching, Mixed, Pipelined hybridization design: Cascade Meta-level, Limitations of hybridization strategies.

**UNIT-V: Evaluating Recommender System:** Introduction, General properties of evaluation research, Evaluation designs, Evaluation on historical datasets, Error metrics, Decision-Support metrics, User-Centred metrics.

**Recommender Systems and communities:** Communities, collaboration and recommender systems in personalized web search, Social tagging recommender systems, Trust and recommendations

**Course Objectives:** At the end of the course, the student shall be able to:

- To describe and determine the purpose and importance of project management from the perspectives of planning, tracking and completion of project
- To compare and differentiate organization structures and project structures
- To implement a project to manage project schedule, expenses and resources with the application of suitable project management tools.

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain conventional and modern software management principles, software economics, and cost estimation techniques.

**CO2:** Analyze software life-cycle phases, process artifacts, and milestone-based project tracking methods.

**CO3:** Apply model-based software architectures and iterative process planning techniques for effective project execution.

**CO4:** Evaluate project organization structures, process automation strategies, and software metrics for project control.

**CO5:** Implement Agile and Scrum practices to manage iterative and adaptive software development projects.

**CO6:** Apply DevOps principles, toolchains, and delivery pipelines to enable continuous integration, deployment, and collaboration.

| <b>CO6</b> | 2     | 3     |

**UNIT-I: Conventional Software Management:** The waterfall model, conventional software Management performance.

**Evolution of Software Economics:** Software Economics, pragmatic software cost estimation.

**Improving Software Economics:** Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections.

**The old way and the new:** The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

**UNIT-II: Life cycle phases:** Engineering and production stages, inception, Elaboration, construction, transition phases. **Artifacts of the process:** The artifact sets, Management artifacts, Engineering artifacts, program artifacts.

**UNIT-III: Model based software architectures:** A Management perspective and technical perspective.

**Work Flows of the process:** Software process workflows, Iteration work flows.

**Check points of the process:** Major milestones, Minor Mile stones, Periodic status assessments.

**Iterative Process Planning:** Work break down structures, planning guidelines, co stand schedule estimating, Iteration planning process, Pragmatic planning.

**UNIT-IV: Project Organizations and Responsibilities:** Line-of-Business Organizations, Project Organizations, evolution of Organizations.

**Process Automation:** Automation Building blocks, The Project Environment.

**Project Control and Process instrumentation:** The seven core Metrics, Management indicators, quality indicators, life cycle expectations, pragmatic Software Metrics, Metrics automation.

**UNIT-V: Agile Methodology, ADAP Ting to Scrum, Patterns for Adopting Scrum, Iterating towards Agility. Fundamentals of DevOps:** Architecture, Deployments, Orchestration, Need, Instance of applications, DevOps delivery pipeline, DevOp seco system. DevOps adoption in projects: Technology aspects, Agiling capabilities, Tool stack implementation, People aspect, processes

**Course Outcomes:** After completion of course, students would be able to:

**CO1:** Explain the fundamentals, architecture, and standards of mobile ad hoc and wireless networks.

**CO2:** Analyze ad hoc network protocols, topology control, broadcasting, and scheduling techniques.

**CO3:** Apply routing, location discovery, energy-efficient communication, and security mechanisms in ad hoc networks.

**CO4:** Evaluate simulation and modeling techniques for wireless, mobile, and ad hoc networks.

**CO5:** Explain the design, challenges, and applications of wireless sensor networks.

**CO6:** Apply sensor network platforms, tools, and research concepts to solve real-world networking problems.

**Course Objectives:**

- To understand the Fundamental Concepts related to sources, shadows and shading
- To understand the Geometry of Multiple Views

**Course Outcomes:** After completion of course, students would be able to:

- CO1:** Explain camera models, image formation, radiometry, shading, and color representation in images.
- CO2:** Apply linear filtering, edge detection, texture analysis, and frequency-domain techniques for image processing.
- CO3:** Analyze multi-view geometry, stereopsis, and image segmentation using clustering and graph-based methods.
- CO4:** Apply model-based segmentation, probabilistic methods, EM algorithm, and object tracking techniques.
- CO5:** Explain geometric camera models, calibration techniques, and analytical photogrammetry concepts.
- CO6:** Apply computer vision techniques to real-world applications such as robot localization and medical image registration.

**Course Outcomes:** At the end of the Course the student will be able to

**CO1:** Explain the evolution, principles, and need for NoSQL databases compared to relational databases.

**CO2:** Compare different NoSQL data models such as key–value, document, column-family, and graph databases.

**CO3:** Apply document-oriented NoSQL databases (MongoDB) for scalable data storage and real-time applications.

**CO4:** Analyze column-oriented NoSQL databases (HBase and Cassandra) for distributed storage and analytics use cases.

**CO5:** Apply key–value and graph NoSQL databases (Riak and Neo4j) to model relationships and large-scale data.

**CO6:** Select and design appropriate NoSQL database solutions for modern applications considering scalability, consistency, and availability.

**UNIT-I:** Overview and History of NoSQL Databases. Definition of the Four Types of NoSQL Database, The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, Impedance Mismatch, Application and Integration Databases, Attack of the Clusters, The Emergence of NoSQL, Key Points.

**UNIT-II:** Comparison of relational databases to new NoSQL stores, Mongo DB, Cassandra, HBASE, Neo4j use and deployment, Application, RDBMS approach, Challenges NoSQL approach, Key-Value and Document Data Models, Column-Family Stores, Aggregate-Oriented Databases. Replication and sharding, Map Reduce on databases. Distribution Models, Single Server, Sharding, Master-Slave

Replication, Peer-to-Peer Replication, Combining Sharding and Replication.

**UNIT-III:** NoSQL Key/Value databases using MongoDB, Document Databases, Document oriented Database Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Web Analytics or Real-Time Analytics, E-Commerce Applications, Complex Transactions Spanning Different Operations, Queries against Varying Aggregate Structure.

**UNIT-IV:** Column-oriented NoSQL databases using Apache HBASE, Column-oriented NoSQL databases using Apache Cassandra, Architecture of HBASE, Column-Family Data Store Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Counters, Expiring Usage.

**UNIT-V:** NoSQL Key/Value databases using Riak, Key-Value Databases, Key-Value Store, Key-Value Store Features, Consistency, Transactions, Query Features, Structure of Data, Scaling, Suitable Use Cases, Storing Session Information, User Profiles, Preferences, Shopping Cart Data, Relationships among Data, Multi operation Transactions, Query by Data, Operations by Sets. Graph NoSQL databases using Neo4, NoSQL database development tools and programming languages, Graph Databases, Graph Database. Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases.

**Course Outcomes:** On completion of this course, the student will be able to

**CO1:** Implement basic neural networks like multilayer perceptron for regression and classification tasks.

**CO2:** Design and train neural networks for text classification problems using datasets like IMDB and Reuters.

**CO3:** Build convolutional neural networks (CNNs) for image classification tasks.

**CO4:** Apply pre-trained CNN models such as VGG16 for transfer learning and image recognition.

**CO5:** Implement word encoding and embedding techniques for NLP applications.

**CO6:** Implement recurrent neural networks (RNNs) for sequence-based data like sentiment analysis.

| <b>CO6</b>      | 3            | 2            |

Software Packages required:

- Keras
- Tensor flow
- Py Torch

**List of Experiments:**

1. Implement multi-layer perceptron algorithm for MNISTH and written Digit Classification.
2. Design a neural network for classifying movie reviews (Binary Classification) using IMDB dataset.

3. Design a neural Network for classifying news wires (Multi class classification) using Reuters dataset.
4. Design a neural network for predicting house prices using Boston Housing Price dataset.
5. Build a Convolution Neural Network for MNIST Handwritten Digit Classification.
6. Build a Convolution Neural Network for simple image (dogs and Cats) Classification
7. Use a pre-trained convolution neural network (VGG16) for image classification.
8. Implement one hot encoding of words or characters.
9. Implement word embedding's for IMDB dataset.
10. Implement a Recurrent Neural Network for IMDB movie review classification problem.

| <b>DATA VISUALIZATION LAB</b>  |                   |          |          |          |            |

**Course Objectives:**

- To visualize the different datasets using histograms, line charts.
- To understand the use of bar charts and box plots.
- To understand Scatter plots, mosaic plots
- To understand different Map visualizations
- To learn advanced graphs such as correlogram, heat map and 3D graphs.

**Course Outcomes:** At the end of the course student will be able to

**CO1:** Load and explore datasets in R to understand data structure and types.

**CO2:** Apply basic visualization techniques such as histograms, line charts, and bar charts to represent data.

**CO3:** Use advanced visualizations like box plots, scatter plots, and scatter plot matrices for multivariate data analysis.

**CO4:** Implement visualizations for large datasets using hexbin plots, heat maps, and correlograms.

**CO5:** Create interactive map visualizations using R libraries like `leaflet` and `maps`.

**CO6:** Apply 3D visualization techniques for better understanding of complex datasets.

### **List of Experiments:**

1. a) Load VA Deaths (Death Rates in Virginia) dataset in R and visualize the data using different histograms.  
b) Load air quality dataset in R and visualize LaGuardia Airport's daily maximum temperature using histogram.
2. Load Air Passengers dataset in R and visualize the data using line chart that shows increase in air passengers over given time period.
3. a) Load iris dataset in R, visualize the data using different Bar Charts and also demonstrate the use of stacked plots.  
b) Load air quality dataset in R and visualize ozone concentration in air.
4. a) Load iris dataset in R, visualize the data using different Box plots including group by option and also use color palette to represent species.  
b) Load air quality dataset in R and visualize air quality parameters using box plots.
5. Visualize iris dataset using simple scatter, multivariate scatter plot and also visualize scatter plot matrix to visualize multiple variables across each other.
6. Load diamonds dataset in R and visualize the structure in datasets with large data points using hexagon binning and also add color palette then use the
7. Load Hair Eye Color dataset in R and plot categorical data using mosaic plot.
8. Load mt cars dataset in R and visualize data using heat map.
9. Install leaflet library in R and perform different map visualizations.
10. Visualize iris data set using 3d graphs such as scatter 3d, cloud, xy plot.
11. Make use of correlogram to visualize data in correlation matrices for iris dataset.
12. Install maps library in R and draw different map visualizations.

**Course Objectives:**

- To equip the students with the skills to effectively communicate in English
- To train the students in interview skills, group discussions and presentation skills
- To motivate the students to develop confidence
- To enhance the students' interpersonal skills
- To improve the students' writing skills

**Course Outcomes: At the end of the course student will be able to**

**CO1:** Demonstrate effective verbal and non-verbal communication skills.

**CO2:** Develop analytical thinking, positive attitude, and self-awareness.

**CO3:** Apply self-management techniques including time, stress, and anger management.

**CO4:** Exhibit proper social, business, and telephone etiquette.

**CO5:** Prepare professional documents, resumes, emails, and perform well in group discussions and interviews.

**CO6:** Build and maintain effective interpersonal relationships in personal and professional contexts.

**UNIT-I: Analytical Thinking & Listening Skills:** Self-Introduction, Shaping Young Minds –A Talk by Azim Premji (Listening Activity), Self –Analysis, Developing Positive Attitude, Perception.

**Communication Skills:** Verbal Communication; Non Verbal Communication (Body Language)

**UNIT – II: Self-Management Skills:** Anger Management, Stress Management, Time Management, Six Thinking Hats, Team Building, Leadership Qualities

**Etiquette:** Social Etiquette, Business Etiquette, Telephone Etiquette, Dining Etiquette

**UNIT – III: Standard Operation Methods:** Basic Grammars, Tenses, Prepositions, Pronunciation, Letter Writing; Note Making, Note Taking, Minutes Preparation, Email & Letter Writing

**UNIT-IV: Job-Oriented Skills:** Group Discussion, Mock Group Discussions, Resume Preparation, Interview Skills, Mock Interviews

**UNIT-V: Interpersonal relationships:** Introduction, Importance, Types, Uses, Factors affecting interpersonal relationships, Accommodating different styles, Consequences of interpersonal relationships

**Course Objective:**

- The course will explain the basic related to writing the technical reports and understanding the concepts related to formatting and structuring the report. This will help students to comprehend the concept of proofreading, proposals and practice

**Course Outcomes:** At the end of the course student will be able to

**CO1:** Demonstrate effective technical writing skills including sentence formation, transitions, and proper use of tenses.

**CO2:** Plan, structure, and draft technical reports tailored to target readers.

**CO3:** Apply editing, proofreading, and summarization techniques to improve readability and clarity.

**CO4:** Present technical reports effectively in written, printed, and verbal formats.

**CO5:** Utilize advanced word processing tools for professional document preparation, formatting, and collaboration.

**CO6:** Understand the fundamentals of Intellectual Property, patenting processes, and global IP practices.

**Unit I: Introduction:** An introduction to writing technical reports, technical sentences formation, using transitions to join sentences, Using tenses for technical writing.

**Planning and Structuring:** Planning the report, identifying reader(s), Voice, Formatting and structuring the report, Sections of a technical report, Minutes of meeting writing.

**Unit II: Drafting report and design issues:** The use of drafts, Illustrations and graphics.

**Final edits:** Grammar, spelling, readability and writing in plain English: Writing in plain English, Jargon and final layout issues, Spelling, punctuation and Grammar, Padding, Paragraphs, Ambiguity.

**Unit III: Proof reading and summaries:** Proofreading, summaries, Activities on summaries.

**Presenting final reports:** Printed presentation, Verbal presentation skills, Introduction to proposals and practice.

**Unit IV: Using word processor:** Adding a Table of Contents, Updating the Table of Contents, Deleting the Table of Contents, Adding an Index, Creating an Outline, Adding Comments, Tracking Changes, Viewing Changes, Additions, and Comments, Accepting and Rejecting Changes, Working with Footnotes and Endnotes, Inserting citations and Bibliography, Comparing Documents, Combining Documents, Mark documents final and make them read only., Password protect Microsoft Word documents., Using Macros,

**Unit V: Nature of Intellectual Property:** Patents, Designs, Trade and Copyright. Process of **Patenting and Development:** technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property
